

## MOTH INVENTORIES OF ELEVEN MAJOR STUDY AREAS IN SOUTH-CENTRAL ALBERTA: ANALYSIS

Charles Durham Bird

Box 22, Erskine, AB, T0C 1G0; cdbird@explornet.com

31 March 2008

Inventory research, starting in 1999 and continuing through 2007, has been carried out on the moths of eleven major study areas in south-central Alberta. With the exception of a semi-urban site in Erskine, all sites were in areas where the vegetation had been relatively undisturbed. Realizing that about 95% of the Aspen Parkland has been disturbed by agriculture or other activities, and some of the remainder will soon be disturbed, the purpose of the research was to document the native moth biodiversity while there was still time to do so. It is strongly recommended that government and other agencies like the Alberta Conservation Association, Ducks Unlimited and Nature Conservancy Canada continue to protect the undisturbed areas (Parks, Conservation Areas, Natural Areas, etc.) under their care and also that more areas be selected for preservation.

The eleven study areas are marked in red on the above map. The areas are: AH – the former Allan Hall Acreage, 3 km S of Nevis; BK – Big Knife Provincial Park, N of Halkirk; BL – Buffalo Lake Conservation Area, N of Stettler; DI – Dry Island Buffalo Jump Provincial Park, E of Huxley; EA – East Arrowwood Coulee, NE of Arrowwood; EP the Bird quarter on East Poplar Creek, NW of Winfield; ER – Bird residence, 5 Maple Close, Erskine; LL – the former Lloyd Lohr farm, SE of Erskine; LS – Lowden Springs Conservation Area, S of Stettler; and RS – Rochon Sands Provincial Park, N of Erskine. One area (ER) is in a semi-urban setting in Erskine, one (EP) is in mixed woods NW of Rimbey, and one (EA) is in the Prairies south of Bassano; all of the remainder are in Aspen Parkland. It wasn't until now that enough sampling had been done to warrant the present analysis. It is hoped that more research will be carried out in 2008.

## HABITATS

In simple terms, the Aspen Parkland is a mosaic of aspen groves surrounded by areas of grassland. However, there is much diversity when one looks in detail at the habitats found in each area and each habitat has its own characteristic plant species. Due to topography, soil type, soil moisture and exposure few sites have exactly similar habitats. The following table illustrates the various habitats present in the study areas.

### HABITATS IN STUDY AREAS

1999-2007, South-central  
Alberta

Habitats	AH	BK	BL	DI	JC	EA	EP	ER	LL	LS	RS
Acer negundo								x			
Artemisia spp.		x	x	x		x				x	
Badlands				x							
Chokecherry/saskatoon	x	x	x	x	x	x	x	x			x

<b>Totals (22)</b>	<b>6</b>	<b>9</b>	<b>9</b>	<b>14</b>	<b>8</b>	<b>9</b>	<b>11</b>	<b>5</b>	<b>2</b>	<b>5</b>	<b>3</b>

Moths with one or a small number of food plants (oligophagy) tend to be found in fewer areas than those that have a wider range of foodplants (polyphagy). Areas with many habitats tend to have many species/greater biodiversity, similarly areas with few habitats tend to have few species/lesser biodiversity.

### SIMILARITY OF THE STUDY AREAS

The study areas have been compared on the basis of simple Percentage Similarity as seen in the following table.

**PERCENTAGE SIMILARITY\* OF MAJOR STUDY AREAS**

	<i>AH</i>	<i>BK</i>	<i>BL</i>	<i>DI</i>	<i>EA</i>	<i>EP</i>	<i>ER</i>	<i>JC</i>	<i>LL</i>	<i>LS</i>	<i>RS</i>

<i>RS</i>	53.23%	53.45%	55.25%	43.15%	40.46%	44.88%	58.52%	39.29%	39.66%	32.62%	

\* number of species common to both sites/total species in site 1 + total species in site 2

The study areas have also been compared on the basis of the Simpson Coefficient. This coefficient reduces the differences in size between the two samples and is widely used in biotic comparisons.

### SPECIES RICHNESS

Species richness is defined as the number of species within a region. Based on the totals in the above table the area with the greatest species richness is EP, followed in descending order by DI, BL, ER, BK, RS, AH, EA, JC and LS. There is, of course, a more or less direct correlation between species richness and the number of habitats present in a given area, i.e. the greater the species richness, the greater the number of habitats. It follows that the greater the number of habitats therefore the greater the number of food plants, hence the greater the potential for an area to be suitable for a larger number of moth species.

### STUDY DAYS/NIGHTS

The number of study days/nights involved in each study area is shown in the last line of the above table. One would logically expect that the greater number of species will have been found in the areas with the greatest number of study nights and vice versa the least number of species will have been found in the areas with the least number of study day/nights. This has generally been found to be the case. It is clear, however, that more study of EA and JC would be beneficial and it is hoped that this will be done in 2008. In doing so, it will be important to be in the areas at times of the year when previous work may have been under-sampled.

### COMMON OR WIDESPREAD SPECIES

Species can be common or widespread for many reasons, but mainly because they are polyphagous or are able to utilize a wide range of food plants.

Of the 1086 moth species encountered in this study, 40, or 3.68%, were found in all of the 11 areas - *Filatima abactella*, *Ypsolopha canariella*, *Y. dentiferella*, *Apotomis dextrana*, *Orthotaenia undulana*, *Choristoneura rosaceana*, *Clepsis persicana*, *C. clemensiana*, *Scoparia biplagiata*, *Crambus perlellus innotatellus*, *Chrysoteuchia topiaria*, *Agriphila ruricolella*, *Pediasia dorsipunctella*, *Zophodia grossulariella*, *Cabera erythemaria*, *Euchlaena tigrinaria*, *Smerinthus jamaicensis*, *S. cerisyi*,

*Phragmatobia assimilans*, *Grammia virgo*, *Lithacodia albidula*, *Raphia frater*, *Apamea commoda*, *A. inficita*, *Proxenus miranda*, *Platyperigea montana*, *Lacinipolia renigera*, *L. lorea*, *Aletia oxygala*, *Orthosia segregata*, *Egira dolosa*, *Protorthodes oviduca*, *Agrotis venerabilis*, *Euxoa tristicula*, *E. ochrogaster*, *Spaelotis clandestina*, *Xestia smithii*, *Agnorisma bugrai*, *Paradiarsia littoralis* and *Protolampra rufipectus*.

Of the 1086 moth species encountered in this study, 63, or 5.8%, have been found in 10 out of the 11 areas - *Gazoryctra novigannus*, *Tinea irrepta*, *Monopis spilotella*, *Glyphidocera hurlberti*, *Coleophora trifolii*, *Gelechia lynceola*, *Chionodes mediofuscella*, *C. psilopterus*, *Plutella xylostella*, *Endothenia nubilana*, *Hedya ochroleucana*, *Notocelia culminana*, *Pseudexentera oregonana*, *Epinotia nisella*, *Croesia albicomana*, *Pandemis canadana*, *Choristoneura conflictana*, *Crambus ainsliellus*, *Macaria occiduaria*, *M. loricaria*, *Lycia ursaria*, *Cabera variolaria*, *Euchlaena johnsonaria*, *Xanthotype sospeta*, *Pero morrisonaria*, *Metanema determinata*, *Metarranthis duaria*, *Sicya macularia*, *Dysstroma citrata*, *Zenophleps alpinata*, *Phyllodesma americana*, *Antheraea polyphemus*, *Clostera albosigma*, *Pheosia rimosa*, *Notodonta simplaria*, *Schizura unicornis*, *Holomelina ferruginosa*, *Platarctia parthenos*, *Grammia parthenice*, *Lophocampa maculata*, *Dasychira vagans*, *Idia americalis*, *Caenurgina crassiuscula*, *Apamea sordens*, *A. scoparia*, *A. devastator*, *Amphipoea americana*, *Energia infumata*, *Litholomia napaea*, *Brachylochia populi*, *Polia imbrifera*, *P. purpurissata*, *P. detracta*, *Lacanobia atlantica*, *Leucania commoides*, *Orthosia revicta*, *Nephelodes minians*, *Feltia jaculifera*, *F. herilis*, *Euxoa divergens*, *Eurois occulta*, *E. astricta* and *Xestia c-nigrum*.

### SPECIES ENCOUNTERED IN ONLY ONE AREA

Species can be seldom encountered for many reasons, including their food plants being infrequent, their habitats being scarce, past climatic conditions, predators, etc. Some of these species may even be rare or endangered.

Of the 1086 species encountered in the present study, 229, or 21.07%, have been found in only one area - *Acanthopteroctetes bimaculata*, *Gazoryctra hyperboreus*, *Lampronia humilis*, *Lyonetia saliciella*, *Caloptilia strictella*, *Micrurapteryx salicifoliella*, *Agonopterix gelidella*, *Bibarrambula allenella*, *Nites betulella*, *Ethmia monticola*, *Brymbia quadrimaculella*, *Denisia haydenella*, *Perittia cygnodiella*, *Elachista virgatula*, *Elachista maritimella*, *Coleophora rosaevorella*, *Coleophora mcdunnoughiella*, *Coleophora maritella*, *Coleophora mayrella*, *Mompha raschkiella*, *Scythris eboracensis*, *Asymmetrura impositella*, *Scythris mixaulla*, *Aristotelia rubidella*, *Evippe prunifoliella*, *Neotelphusa praefixa*, *Xanolechia aethiops*, *Lita sexpunctella*, *Chionodes lugubrella*, *Aroga near paraplutella*, *Bondia comonana*, *Wockia asperipunctella*, *Rhizognothis interrupta*, *Plutella (Greya) vanella*, *Ypsolopha senex*, *Schreckensteiniella festaliella*, *Pennisetia marginata*, *Synanthedon fatifera*, *Synanthedon polygoni*, *Prochoreutis sp. nr myllerana*, *Caloreas occidentella*, *Prionoxystus robiniae*, *Barbara mappana*, *Phaneta salmicolorana*, *P. artemisiana*, *Eucosma nr barbara*, *E. serapicana*, *E. mediotriata*, *E. similiana*, *Pelochrista occipitana*, *Epiblema resumptana*, *Sonia n. sp.*, *Proteoteras willingana*, *Epinotia columbia sensu R.L. Brown*, *E. medioplagata*, *E. cruciana*, *Ancylis nubeculana*, *Hystrichophora ochreicostana*, *H. vestaliana*, *Dichrorampha simulana*, *D. bittana*, *D. sedatana*, *Cydia prosperana*, *Croesia curvalana*, *Acleris braunana*, *A. semiannula*, *A. implexana*, *A. celiana*, *A. maximana*, *Decodes mcdunnoughi*, *Archips striana*, *A. alberta*, *Lozotaenia hesperia*, *Adoxophyes negundana*, *Xenotemna pallorana*, *Sparganothis violaceana*, *Aethes prob sexdentata*, *A. prob heleniana*, *A. prob monera*, *Platphalonidia poss. albertae*, *Cochylis nana*, *Thyralia bunteana*, *Aethes promptana*, *Eudonia albertalis*, *Munroessa icciusalis*, *Saucrobotys fumoferalis*, *Loxostege lepidalis*, *Pyrausta orphisalis*, *P. scurralis*, *Diastictis ventralis*, *Crambus awemellus*, *Platytes vobisne*, *Agriphila biarmica*, *Tehama bonifatella*, *Aglossa cuprina*, *Catastia actualis*, *Pyla aequivoca*, *P. hanhamella*, *Dioryctria pseudotsugella*, *Homoeosoma stipiticellum*, *Caudellia nigrella*, *Geina tenuidactyla*, *Paraplatyptilia albiciliata*, *Stenoptilia coloradensis*, *Oidaematophorus phaceliae*, *O.*

grisescens, *Hellinsia lactodactylus*, *Emmelina monodactyla*, *Archiearis infans*, *Macaria brunneata*, *Semiothisa ulsterata*, *M. unipunctaria perplexa*, *Digrammia decorata*, *Orthofidonia exornata*, *Ematurga amitaria*, *Eufidonia discospilata*, *Pero honestaria*, *Ennomos subsignaria*, *Spodolepis substriaria*, *Neoterpes trianguliferata*, *Besma quercivoraria*, *Lambdina fiscellaria*, *Nepytia canosaria*, *Plataea trilinearia*, *Tetracis cachexiata*, *Nemoria mimosaria*, *Chaetoscelis bistrariaria*, *Scopula ancellata*, *Eustroma semiatrata*, *Thera juniperata*, *T. otisi*, *Rheumaptera hastata*, *Anticlea multiferata*, *Xanthorhoe iduata*, *Orthonama evansi*, *Trichodezia albovittata*, *Eupithecia palpata*, *E. sheppardata*, *E. ammonata*, *E. multistrigata*, *E. annulata*, *E. interruptofasciata*, *E. albicapitata*, *E. mutata*, *Ceratomia undulosa*, *Sphinx poecila*, *Hemaris diffinis*, *Hyles lineata*, *Schizura ipomeae*, *Dasychira plagiata*, *Idia lubricalis*, *Phalaenophana pyramusalis*, *Hypena deceptalis*, *Bomolocha atomaria*, *Lomanaltes eductalis*, *Hypena californica*, *Drasteria perplexa*, *D. adumbrata*, *Catocala meskei*, *Trichoplusia ni*, *Polychrisia esmeralda*, *Eosphropteryx thyatyroides*, *Autographa sansoni*, *A. mappa*, *A. flagellum*, *Syngrapha alias*, *Leuconycta lepidula*, *Conocharis arizonae*, *Acronicta radcliffei*, *A. quadrata*, *A. sperata*, *Apamea longula*, *Amphipoea interoceanica*, *Aseptis characta*, *Trachea delicata*, *Escaria homogena*, *Lithophane petulca*, *L. grotei*, *L. pexata*, *Eupsilia devia*, *Anathix aggressa*, *Fishia discors*, *Xylotype acadia*, *Mniotype tenera*, *Brachylomia borealis*, *Apharetra dentata*, *Oncocnemis saundersiana*, *O. viriditincta*, *O. pallidior*, *O. riparia*, *Cucullia speyeri*, *C. postera*, *Mamestra curialis*, *Polia nugatis*, *Melanchnra picta*, *Lacanobia nevadae*, *Trichordestra tacoma*, *Lacinipolia naevia*, *Pseudaletia unipuncta*, *Leucania anteoclara*, *Crocigrapha normani*, *Tholera americana*, *Homorthodes furfurata*, *Protorthodes utahensis*, *Agrotis robustior*, *A. volubilis*, *Euxoa pestula*, *E. nevada*, *E. castanea*, *E. olivalis*, *E. dargo*, *E. difformis*, *E. auripennis*, *E. servita*, *Protopygia querula*, *Euagrotis exuberans*, *Diarsia dislocata*, *Xestia oblata*, *Coenophila opaciformis*, *Aplectoides condita*, *Abagrotis trigona*, *A. alternata*, *A. orbis*, *A. nanalis*, *A. reedi*, *A. cupida*, *Pyrrhia exprimens*, *Heliopsis phloxiphagus* and *H. ononis*.

### SPECIES FOUND ONLY IN AREAS EP AND ER

Area reports have not yet been prepared for EP and ER, but as the species encountered in each of these areas have been mentioned above and the areas have been compared to the other areas, it has been felt important to mention below the species that have been found only in these two areas.

#### EP - the Bird quarter on East Poplar Creek, 8 km NW of Winfield

Moth species found only at EP (80) - *Gazoryctra hyperboreus*, *Lampronia humilis*, *Lyonetia saliciella*, *Caloptilia strictella*, *Micrurapteryx salicifoliella*, *Agonopterix gelidella*, *Bibarrambla allenella*, *Nites betulella*, *Brymbia quadrimaculella*, *Denisia haydenella*, *Elachista maritimella*, *Coleophora mayrella*, *Mompha raschkiella*, *Asymmetrura impositella*, *Neotelphusa praefixa*, *Xanolechia aethiops*, *Wockia asperipunctella*, *Rhizognothis interrupta*, *Plutella (Greya) vanella*, *Schreckensteinia festaliella*, *Synanthedon fatifera*, *Prochoreutis sp. nr myllerana*, *Caloreas occidentella*, *Prionoxystus robiniae*, *Barbara mappana*, *Epinotia medioplugata*, *Epinotia cruciana*, *Cydia prosperana*, *Acleris braunana*, *Acleris celiana*, *Decodes mcdunnoughi*, *Archips striana*, *Archips alberta*, *Lozotaenia hesperia*, *Aethes prob sexdentata*, *Thyralia bunteana*, *Eudonia albertalis*, *Munroessa icciusalis*, *Saucrobotys fumoferalis*, *Crambus awemellus*, *Agriphila biarmica*, *Tehama bonifatella*, *Caudellia nigrella*, *Geina tenuidactyla*, *Stenoptilia coloradensis*, *Oidaematophorus phaceliae*, *Archiearis infans*, *Macaria brunneata*, *Semiothisa ulsterata*, *Macaria unipunctaria perplexa*, *Orthofidonia exornata*, *Eufidonia discospilata*, *Besma quercivoraria*, *Lambdina fiscellaria*, *Eustroma semiatrata*, *Rheumaptera hastata*, *Anticlea multiferata*, *Xanthorhoe iduata*, *Orthonama evansi*, *Trichodezia albovittata*, *Eupithecia palpata*, *Eupithecia annulata*, *Sphinx poecila*, *Phalaenophana pyramusalis*, *Hypena deceptalis*, *Lomanaltes eductalis*, *Polychrisia*

esmeralda, *Eosphropteryx thyatyroides*, *Autographa sansoni*, *Autographa mappa*, *Syngrapha alias*, *Acronicta sperata*, *Lithophane petulca*, *Lithophane pexata*, *Eupsilia devia*, *Xylotype acadia*, *Lacanobia nevadae*, *Diarsia dislocata*, *Aplectoides condita* and *Pyrrhia exprimens*.

The moths of EP were most similar (50.40%) to those of the Bird residence in Erskine, and least similar (23.31%) to those of the Lowden Springs Conservation Area.

#### **ER – the Bird residence, 5 Maple Close, Erskine**

Moth species found only at ER (17) - *Ypsolopha senex*, *Pennisetia marginata*, *Proteoteras willingana*, *Acleris semiannula*, *Acleris implexana*, *Adoxophyes negundana*, *Platphalonidia poss. albertae*, *Nepytia canosaria*, *Thera juniperata*, *Eupithecia sheppardata*, *Ceratonia undulosa*, *Bomolocha atomaria*, *Hypena californica*, *Trachea delicata*, *Pseudaletia unipuncta*, *Agrotis volubilis* and *Euxoa difformis*.

The moths of ER were most similar (59.29%) to those of the Buffalo Lake Conservation Area, and least similar (33.73%) to those of the Lowden Springs Conservation Area.

### **TAXONOMIC WORK STILL NEEDED**

While the above list of 1086 species may seem large, it should not give the impression that we know all there is to know about the moths that occur in the geographical area involved in the present research. On the contrary, much taxonomic work remains to be done, especially in the microlepidoptera. New species remain to be described and monographic work is needed to straighten out certain species complexes. Barcoding is currently being done on members of some of the problem areas and this may help (<http://www.barcodinglife.com/views/login.php>). A major problem is that there simply are not enough taxonomists to do the work, also that there is not enough government funding to hire taxonomists and to curate the museums that house the insect collections where voucher and study specimens are kept. Groups where taxonomic work is needed, and those working on them, include the following.

Incurvariidae – *Lampronia*, *Cauchas* (Dr. Donald Davis)

Lyonetiidae – *Lyonetia* (Dr. Donald Davis)

Gelechiidae – many genera including *Aroga* (no one is currently studying these)

Coleophoridae – *Coleophora* (Dr. Jean-François Landry)

Tortricidae – *Acleris* (Dr. P. T. Dang), *Sonia* (Dr. Don Wright), *Pelochrista* (Dr. Don Wright), *Eucosma* (Dr. Don Wright), *Olethreutes* (no one is currently working on this genus)

Cochylidae – several genera (Drs. Eric Metzler and John Brown)

Crambidae – *Pediasia* (no one is currently working on the species of this group)

Pterophoridae – several genera (Doug Macaulay)
