

# THE “NATURE” OF SCIENCE IN KANANASKIS COUNTRY

## INTERACTIONS AND ECOSYSTEMS STUDENT DATA FORM

**Date:** \_\_\_\_\_

**Time:** \_\_\_\_\_

**Weather Observations:** \_\_\_\_\_

**Group Members:** \_\_\_\_\_

\_\_\_\_\_

### **Student Data Sheet**

In this field study, you will be exploring three different ecosystem; a grassland, an aspen parkland, and a boreal forest. In your assigned groups, complete the data sheet with as much detail and accuracy as possible as directed in this data form.

### **TEMPERATURE**

Use the air and soil thermometers to gather the following readings. Ensure thermometers are left for 2 minutes to accurately reflect the temperature of the area

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Air Temp. (°C) <b>2 m</b> above the ground			
Air Temp. (°C) <b>1 m</b> above the ground			
Air Temp. (°C) at ground level			
Soil Temp. (°C)			

### **LIGHT**

Using the Light / Moisture Meter, set the switch to the “light” position, hold the meter upright so the photometer bulbs are towards the sky and record the reading. The meter reads A (dark) to H (bright).

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Light (A to H)			

### **SOIL MOISTURE**

Using the Light / Moisture Meter, set the switch to the “moisture” position. Insert the probe gently into the soil and record the reading, 1 (dry) to 10 (wet).

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Soil Moisture (1 to 10)			

### **WIND**

Answer the following questions for each ecosystem

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Is the presence of wind in this area: High (H), Medium (M) or Low (L)			
What objects could influence wind patterns in this area?			

**SOIL PROFILE**

Using the soil sampling tube, remove a cross section of soil from your quadrat. Use the soil sample to draw a detailed diagram of the cross section that includes:

- Carefully label and describe each layer of soil
- Measurements of the thickness of each layer (cm).
- Descriptions of the components of each layer.

After drawing and labelling the soil profile, use the soil sample to complete the following 2 soil tests (compactability and pH), then return it into the hole you removed it from.

<b>Grassland</b>	<b>Aspen Parkland</b>	<b>Boreal Forest</b>

### **SOIL COMPACTION**

From the soil plug retrieved above, gather a handful of soil in your hand. Squeeze the soil tightly in your hand, then open your hand, does the soil stay in a tight ball, crumble slowly, or quickly fall apart? Based on how the soil feels and how easy it was to retrieve the soil plug above answer the following:

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
By using the corresponding letter, record what the soil is like in your quadrat:  Highly Compactable (H) Medium Compactable (M) Low Compactable (L)			

### **SOIL pH**

Take a pinch of the soil from the soil sampling tube and add it to the soil sampling vile. Add half the vile with distilled water and shake until a soil slurry forms. Insert a stripe of pH paper into the vile and compare the colour reading.

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Soil pH (1 to 14)			

### **SLOPE**

Use a clinometer to determine the angle of the slope your quadrat is on. This can be done by placing the clinometer directly on the ground and taking the reading.

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Slope (in degrees)			

### **ASPECT**

Use the compass to determine the direction that your quadrat is facing. Stand at the up-hill side of the quadrat and look down-hill towards the other side of the quadrat. What direction (in degrees and words) does this line indicate. For example: south / 180 degrees.

	<b><u>Grassland</u></b>	<b><u>Aspen Parkland</u></b>	<b><u>Boreal Forest</u></b>
Aspect (in words and degrees)			

## **EVIDENCE OF BIOTIC FEATURES - GRASSLAND**

Using the square below, complete a detailed drawing of your **3m x 3m quadrat** using symbols to indicate where insects (or insect evidence such as webs, galls, casings, or burrows), tracks, scat, browse, or any other evidence was found. Then detail or identify it on the chart below.

<b>Symbol</b>	<b>Description or identification of Biotic Feature</b>

**EVIDENCE OF BIOTIC FEATURES – ASPEN PARKLAND**

Using the square below, complete a detailed drawing of your **3m x 3m quadrat** using symbols to indicate where insects (or insect evidence such as webs, galls, casings, or burrows), tracks, scat, browse, or any other evidence was found. Then detail or identify it on the chart below.

Symbol	Description of Biotic Feature

**EVIDENCE OF BIOTIC FEATURES – BOREAL FOREST**

Using the square below, complete a detailed drawing of your **3m x 3m quadrat** using symbols to indicate where insects (or insect evidence such as webs, galls, casings, or burrows), tracks, scat, browse, or any other evidence was found. Then detail or identify it on the chart below.

Symbol	Description of Biotic Feature

## **GRID SQUARE DRAWING – GRASSLAND**

Randomly place your 50 cm x 50 cm grid square into your quadrat. In the grid below, do a detailed drawing of the plants found in your grid square.

After completing your drawing, label the plants according to the following:

M - Moss

G – Grass

H – Herb (flowering plant)

S – Shrub

**GRID SQUARE DRAWING – ASPEN PARKLAND**

Randomly place your 50 cm x 50 cm grid square into your quadrat. In the grid below, do a detailed drawing of the plants found in your grid square.

After completing your drawing, label the plants according to the following:  
M - Moss  
G – Grass  
H – Herb (flowering plant)  
S – Shrub

## **GRID SQUARE DRAWING – BOREAL FOREST**

Randomly place your 50 cm x 50 cm grid square into your quadrat. In the grid below, do a detailed drawing of the plants found in your grid square.

After completing your drawing, label the plants according to the following:

M - Moss

G – Grass

H – Herb (flowering plant)

S – Shrub

## Focusing Questions

Based on your studies today, how would you describe a grassland, aspen parkland, and boreal ecosystems?

---

---

---

What ecosystem did you enjoy the most, list these factors. Do you think other visitors (e.g. recreationalists) would have the same conclusion?

---

---

---

What land use impacts (human impacts) did you observe in each of the ecosystems?

Grasslands: \_\_\_\_\_

Aspen Parkland: \_\_\_\_\_

Boreal Forest: \_\_\_\_\_

Which ecosystem do you think was the most sensitive to human impacts? Detail the reasons why you think this.

---

---

---

If you were a land manager, which ecosystem would you work to protect, why?

---

---

---
